

Use Case - Checking show schedule

Primary Actor: Listener/User

Supporting actor: schedule database

Trigger: the user selects "show schedule" in the app

Goal: View upcoming radio shows and their scheduled times.

Preconditions:

- The user has opened the radio station app.
- The station's schedule is available in the system.

Main path:

1. The user opens the radio station app.
2. The user selects the Show Schedule.
3. The system retrieves the current show schedule from the database.
4. The system displays details such as the show name, DJ, date, start time, end time, and genre.

Exception flow:

- If no schedule is available, the system displays a message such as “No upcoming shows are currently scheduled.”
- If the schedule cannot be retrieved, the system informs the user that there was an error loading the schedule.

Successful postcondition:

- The user can view the station's current and upcoming shows.

Unsuccessful postconditions:

- The user sees the schedule, but it is not updated with the right information
- There are no schedules available to look at

Stakeholders:

User – wants to access the show schedule

Station Administrators – updates the show schedule accordingly

DJ's – Communicate with the administrators on schedule availability to host shows

In Scope:

Access to the show schedule, retrieve scheduled shows, display shows by date and time, select a show, and view information about the selected show.

Out of Scope:

Creating a show, editing a show, deleting a show, assigning a DJ to a show, managing DJ accounts, and starting or ending a live broadcast are separate use cases.

Business Rules

- Only shows that have been scheduled and approved by the radio station may appear on the public schedule.
- Each show must have a valid start time and end time.
- A show must be associated with the correct DJ or host.
- The schedule displayed to the user must reflect the most recently saved schedule information.
- Regular listeners cannot modify the show schedule.
- Only users with the appropriate permissions, such as DJs or administrators, may create or modify schedule information.
