Use Case - Editing DJ Profile

Primary Actor: DJ

Supporting Actor: DJ profile database

Trigger: The DJ selects "Account Settings" in the Staff Portal to edit their profile information.

Goal: Allow DJs to update their profile information, such as DJ name, genre, and profile picture.

Preconditions:

- The DJ has logged into the Staff Portal.
- The DJ has an existing profile in the system.
- The DJ has permission to modify their own profile.
- The database is available.

Main Path:

1. The DJ logs into the Staff Portal.
2. The DJ selects Account Settings.
3. The system retrieves the DJ's current profile information from the database.
4. The system displays the DJ's current profile information.
5. The DJ edits their information, such as DJ name, genre, or profile picture.
6. The DJ selects Save Changes.
7. The system verifies that the DJ has permission to edit the profile.
8. The system validates the updated information.
9. The system updates the DJ's information in the database.
10. The system displays a confirmation message that the profile was successfully updated.

Exception Flow:

- If the DJ does not have permission to edit the profile, the system displays an access denied message.
- If the DJ enters invalid information, the system asks them to correct it before saving.
- If the database cannot be accessed, the system displays an error message informing the DJ that the changes could not be saved.
- If the DJ profile cannot be found, the system informs the DJ that the profile is unavailable.

Successful Postcondition:

The DJ's updated profile information is successfully saved in the database and can be displayed in the Staff Portal and other areas of the radio station app.

Unsuccessful Postconditions:

- The DJ's changes are not saved because of a database or system error.
- The DJ enters invalid information that cannot be accepted.
- The DJ does not have the necessary permissions to modify the profile.
- The profile information remains unchanged.

Stakeholders:

- **DJs** – Want to manage their profile information and keep it updated.
- **Station Administrators** – Want DJ profiles to contain accurate and appropriate information.
- **Listeners/Users** – Want to view updated information about their favorite DJs.

In Scope:

Accessing Account Settings, retrieving existing DJ profile information, editing DJ name, genre, and profile picture location, validating changes, saving updated information to the database, and displaying confirmation messages.

Out of Scope:

Creating or deleting DJ profiles, changing account passwords, modifying another DJ's profile, managing user permissions, editing show schedules, and uploading radio show audio are separate use cases.

Business Rules:

- Only authenticated users with the appropriate permissions may edit DJ profiles.
- DJs can only modify their own profiles unless they have administrative permissions.
- DJ names cannot be empty and must not exceed 255 characters.
- Genre and profile picture location must not exceed the database's character limits.
- A DJ's unique ID and associated user ID cannot be modified through profile editing.
- All profile changes must be validated before being saved.

- Updated information must be stored in the database and reflected when the DJ profile is retrieved again.
- Users without DJ profile editing permissions cannot modify DJ information.
