Use Case: Editing a User Profile

Inside Scope:

- Saving account details
- Verifying account ownership
- Verifying received parameters

Outside Scope:

- Permission modification

Primary Actor: Users

Supporting Actors: IT, Moderators

Goal: To edit user account details

Preconditions:

- The user account must exist
- The user must be authenticated
- The user must be allowed to edit account details

Postconditions:

- Account details will be saved

Success Scenario: The user is able to save their modified account details

Step #	User	System
1	User indicates they want to change account details	System enables editing

2	User changes account information	
3	User submits new account changes	System verifies the parameters provided
4		System verifies authentication is for the account being altered
5		System saves details to storage

Alternative Scenarios:

- 2a-3a. User cancels: The system returns to Step 1
- 4a. The user is a moderator: The system continues

Exception Scenarios:

- 3a. Parameters received are invalid: Alert the user the parameters provided are invalid, return to Step 2
- 4a. User is not authenticated as account being altered: Alert user that they are not authorized to alter that user, notify them that they may need to relog in, return to Step 1

Business Rules:

- Accounts must only be altered if the altering user owns that account
- Accounts must only be altered if the altering user has the permission to do so
- Moderators must be able to alter any user details
- Passwords require different requirements for altering

Quality Rules:

- Data must be valid for system
