Use Case Name: Create a Comment

Primary Actor: Authenticated User

Description: Allows an authenticated user with the CAN_POST_COMMENTS permission to post a comment on a post or reply to an existing comment.

Preconditions:

- The user is authenticated.

- The user has permission to post comments.

- The target post exists.

Trigger: The user submits a comment.

Main Success Flow:

1. The user submits a request to create a comment.

2. The system receives the post ID, optional reply ID, and comment content.

3. The system verifies the user's authentication and posting permission.

4. The system validates that the comment is not empty and does not exceed 1,000 characters.

5. The system saves the comment to the database.

6. The system returns an HTTP 201 Created response.

Alternative Flows:

- If the user is not authenticated, the system returns 401 Unauthorized.

- If the request contains invalid comment content, the system returns 400 Bad Request.

- If the user lacks permission, the system denies the request.

Postconditions:

- On success, the comment is stored in the database.

- On failure, the comment is not created.

Use Case Name: Delete a Comment

Primary Actor: Authenticated User

Description: Allows an authenticated user with the CAN_DELETE_COMMENTS permission to delete their own comment.

Preconditions:

- The user is authenticated.

- The user has permission to delete comments.

- The comment exists and belongs to the authenticated user.

Trigger: The user requests deletion of a comment.

Main Success Flow:

1. The user submits a request to delete a comment using its comment ID.

2. The system receives the comment ID.

3. The system verifies the user's authentication and deletion permission.

4. The system checks whether the comment belongs to the authenticated user.

5. The system deletes the matching comment from the database.

6. The system returns an HTTP 204 No Content response.

Alternative Flows:

- If the user is not authenticated, the system returns 401 Unauthorized.

- If the comment ID is invalid, the system returns 400 Bad Request.

- If the comment does not exist or does not belong to the user, the system returns 404 Not Found.

- If the user lacks permission, the system denies the request.

Postconditions:

- On success, the comment is removed from the database.

- On failure, the comment remains unchanged.
